

a' *one's*
vicinity of the current position location detected by said
[position] location detection means, [that of the] and said
designation information [having image data which matches with the
image fetched by said fetching means] corresponding to said image
data for retrieving said additional information.--

--5. (Amended) An information retrieval method for
retrieving information by information retrieval apparatus from a
data base which [has] contains registration data including
position data, image data and designation information for
[specification of individual information in a mutually
corresponding relationship] retrieval of additional information,
comprising the steps of:

a²
[fetching] obtaining an image;

detecting [a current position] the current
position location of the information retrieval apparatus; and

selecting[, from within the] image data from said
data base which corresponds to the image obtained, said image
data having [the] position data [regarding] representing
positions [around] in the vicinity of the detected current
position location of the information retrieval apparatus, [that
of the] and designation information [having image data which
matches with the fetched image] corresponding to said image data
for retrieving said additional information.
